**Prof. PhD. Brajesh K. Singh**

Editor-in-Chief

Journal of Sustainable Agriculture and Environment

Dear Editor,

I hereby enclose the manuscript entitled “Water-Use Efficiency and Rice Productivity under Reduced Irrigation in Tropical Arid Conditions” by Lesly Alberca *et al.* to be considered for publication in *Journal of Sustainable Agriculture and Environment*.

Our study evaluated the effects of different irrigation water volumes on the agronomic performance, grain quality, yield, and water-use efficiency of rice (*Oryza sativa* L.) under the conditions of the Chira Valley, Peru. The results demonstrate that reducing irrigation water volume by up to 23.5% did not significantly affect grain yield or quality while increasing water-use efficiency by up to 26% compared with conventional irrigation practices. These findings provide practical evidence to support more sustainable irrigation management in water-limited rice production systems.

We believe this manuscript is well suited to *Journal of Sustainable Agriculture and Environment* because it addresses sustainable crop production and efficient water resource management, topics that are central to the journal's scope. We confirm that this manuscript is original, has not been published previously, and is not under consideration by any other journal. All authors have approved the manuscript and agree with its submission. The authors declare no conflicts of interest.

Yours sincerely,

---
